

CLAIMS

- 1 1. A method for irradiating a target, comprising the steps
2 of:
3 establishing a relationship of at least one marker
4 relative to the target;
5 generating an image signal of the least one marker;
6 generating a tracking signal in response to the image
7 signal; and
8 adjusting a radiation beam in response to the tracking
9 signal to track the target.
- 10 2. The method as claimed in claim 1, wherein:
11 the step of establishing a relationship of at least one
1 marker relative to the target includes implanting
2 the at least one marker in a patient undergoing a
3 radiation treatment for a tumor;
4 the step of generating an image signal includes
5 generating an X-ray image of the at least one
6 marker; and
7 the step of generating a tracking signal includes
8 generating the tracking signal to track a movement
9 of the tumor.

- 1 3. The method as claimed in claim 1, wherein the step of
2 generating an image signal includes generating the image
3 signal regarding an anatomy of a patient having a tumor
4 as the target.
- 1 4. The method as claimed in claim 1, wherein the step of
2 generating an image signal further includes the steps of:
3 illuminating the target and an area near the target with
4 a first image beam; and
5 detecting a first image of the at least one marker formed
6 by the first image beam.
- 1 5. The method as claimed in claim 4, wherein the step of
2 generating an image signal further includes the steps of:
3 illuminating the target and the area near the target with
4 a second image beam unparallel to the first image
5 beam; and
6 detecting a second image of the at least one marker
7 formed by the second image beam.
- 1 6. The method as claimed in claim 1, wherein the step of
2 adjusting a radiation beam further includes the steps of:
3 superimposing the tracking signal on a radiation
4 treatment plan; and
5 generating a beam adjustment signal using the treatment
6 plan with the tracking signal superimposed thereon.

- 1 7. The method as claimed in claim 1, wherein the step of
2 adjusting a radiation beam further includes adjusting the
3 radiation beam using a first multiple leaf collimator
4 having a plurality of movable leaves arranged in two rows
5 opposite to each other.
- 1 8. The method as claimed in claim 7, wherein the step of
2 adjusting a radiation beam further includes adjusting the
3 radiation beam using a second multiple leaf collimator
4 having a plurality of movable leaves arranged in two rows
5 opposite to each other and unparallel to the plurality of
leaves of the first multiple leaf collimator.

- 1 11. An apparatus for irradiating a target, comprising:
2 a platform for supporting an object having a marker
3 indicating a position of the target;
4 a radiation source, said radiation source generating a
5 radiation beam toward said platform;
6 a beam adjuster between said radiation source and said
7 platform;
8 a first image detector, said first image detector
9 generating a first image signal of the marker; and
10 a control module coupled to said image detector and to
11 said beam adjuster, said control module generating
12 a beam adjustment signal for said beam adjuster in
13 response to the first image signal.
14. The apparatus of claim 11, said control module being
15 further coupled to said radiation source and generating a
16 control signal to switching off said radiation source in
17 response to the first image signal.
18. The apparatus of claim 11, said control module being
19 further coupled to said platform and generating a control
20 signal to move said platform in response to the first
21 image signal.
22. The apparatus of claim 11, said first image detector
23 including at least one device selected from a group of
24 devices consisting of a video camera, an X-ray imager, a
25 magnetic field detector, an ultrasound sensor, a computed
26 tomography imager, a single photon emission computed
27 tomography imager, a magnetic resonance imager, a
28 magnetic resonance spectroscopy imager, and a positron
29 emission tomography imager.

- 1 15. The apparatus of claim 11, further comprising a gantry,
2 said gantry housing said radiation source and said beam
3 adjuster.
- 1 16. The apparatus of claim 15, said control module being
2 further coupled to said gantry and generating a control
3 signal to move said gantry in response to the first image
4 signal.
- 1 17. The apparatus of claim 11, further comprising a first
2 image beam source generating a first image beam toward
3 said platform, said first image detector generating the
4 first image signal by detecting the first image beam.
- 1 18. The apparatus of claim 17, further comprising:
2 a second image beam source, said second image beam source
3 generating a second image beam toward said platform
4 and unparallel to the first image beam; and
5 a second image detector coupled to said control module,
6 said second image detector generating a second
7 image signal by detecting the second image beam.
- 1 19. The apparatus of claim 11, said beam adjuster including a
2 first multiple leaf collimator comprised of a first row
3 of movable leaves and a second row of movable leaves
4 opposite to each other.
- 1 20. The apparatus of claim 19, said beam adjuster further
2 including a second multiple leaf collimator between said
3 first multiple leaf collimator and said platform and
4 comprised of a plurality of movable leaves unparallel to
5 said first row and said second row of movable leaves in
6 said first multiple leaf collimator.

- 1 21. A radiation therapy process, comprising the steps of:
2 marking a tumor in a patient with at least one marker;
3 generating a first image signal of the least one marker;
4 generating a tracking signal in response to the first
5 image signal to track a movement of the tumor; and
6 adjusting a first multiple leaf collimator in response to
7 the tracking signal to adjust a radiation beam
8 projected onto the patient.

- 1 22. The radiation therapy process of claim 21, the step of
2 marking a tumor including implanting the at least one
3 marker into the patient.

- 1 23. The radiation therapy process of claim 21, the step of
2 generating a first image signal including the steps of:
3 illuminating the tumor and an area near the tumor with a
4 first image beam; and
5 detecting a first image of the at least one marker formed
6 by the first image beam.

- 1 24. The radiation therapy process of claim 23, further
2 comprising the steps of:
3 illuminating the tumor and the area near the tumor with a
4 second image beam, the second image beam being
5 unparallel to the first image beam;
6 detecting a second image of the at least one marker
7 formed by the second image beam; and
8 generating a second image signal in response to the
9 second image of the at least one marker.

- 1 25. The radiation therapy process of claim 21, the step of
2 adjusting a radiation beam including the steps of:
3 superimposing the tracking signal on a radiation
4 treatment plan for the tumor; and
5 generating a beam adjustment signal using the radiation
6 treatment plan with the tracking signal
7 superimposed thereon.
- 1 26. The radiation therapy process of claim 21, further
2 comprising the step of moving a platform supporting the
3 patient to reposition the patient in response to the
4 tracking signal.
- 1 27. The radiation therapy process of claim 21, further
2 comprising the step of moving a source generating the
3 radiation beam to adjust a projection direction of the
4 radiation beam onto the patient in response to the
5 tracking signal.
- 1 28. The radiation therapy process of claim 21, further
2 comprising the step of switching off the radiation beam
3 in response to the tracking signal.

- 1 29. A process for irradiating a target in an animal body,
2 comprising the steps of:
3 collecting a plurality of images at a plurality of phases
4 in a cycle, said plurality of images providing an
5 indication of a location of the target;
6 creating a treatment plan based at least in part on the
7 plurality of images collected at the plurality of
8 phases in the cycle; and
9 delivering a radiation beam to the animal body according
to the treatment plan.
- 20
- 1 30. The process of claim 29, the step of collecting a
2 plurality of images of the target including the steps of:
3 implanting at least one marker into the animal body; and
4 collecting a plurality of images of the at least one
5 marker at the plurality of phases in the cycle.
